virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application is eliminating any cancer cells left after surgical removal of a tumour). Also contemplated is ex vivo treatment, especially by passing blood through a matrix containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or MHC-mismatched lymphocytes in extracted bone marrow. Since (A) is not inhibited by factor I, it can bind repeatedly to factor B (which is the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    19-NOV-1996;

                                                                                                                                                                                                                                                              forms a down-regulation resistant C3 convertage. (A), their variants, fragments and conjugates are used to deplete levels of complement pathway proteins (by superactivation until one or more components are exhausted), specifically to prevent rejection of foreign material (particularly a xenograft) but also to prevent complement mediated diseases resulting from (surgical) injury or antibody-antigen interaction in autoimmune disease, also to localise and/or amplify endogenous complement protein conversion and deposition at a specific site (e.g. a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Modified complement pathway protein that forms C3 convertase resistant to down-regulation - used to exhaust the complement
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            down-regulation resistant C3 convertase; xenograft rejection; therapy; complement-mediated disease; autoimmune disease; leukaemia cell; tumour; complement-mediated response; MHC-mismatched lymphocyte; mutein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (see AAW34606 for wild type protein). This protein is a protein of the invention, and is a modified native complement pathway protein (A) that forms a down-regulation resistant C3 convertase. (A), their variants,

                                               This sequence represents a mutated human C3 protein of the invention (see ANM34606 for wild type protein. This protein is a protein of the invention, and is a modified native complement pathway protein (A) that forms a down-regulation resistant C3 convertase. (A), their variants, fragments and conjugates are used to deplete levels of complement pathway proteins (by superactivation until one or more components are exhausted), specifically to prevent rejection of foreign material (particularly a xenograft) but also to prevent complement-mediated diseases resulting from (surgical) injury or antibody-antigen interaction in autoimmune disease, also to localise and/or amplify endogenous complement protein conversion and deposition at a specific site (e.g. a virus, infected cell or tumour, to increase sensitivity to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Modified complement pathway protein that forms C3 convertase resistant to down-regulation - used to exhaust the complement pathway by super-activation, especially for preventing graft rejection, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            inactivated), causing inactivation
consumption of factor B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; C3 protein; convertage; complement pathway protein; infection; down-regulation resistant C3 convertage; xenograft rejection; therapy; complement-mediated disease; autoimmune disease; leukaemia cell; tumour; complement-mediated response; MHC-mismatched lymphocyte; mutein.
     complement-mediated responses; a particular application
any cancer cells left after surgical removal of a tumou:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WPI; 1997-457534/42

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                contemplated is ex vivo treatment, especially by passing blood through a matrix containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or MHC-mismatched lymphocytes in extracted bone marrow. Since (A) is not inhibited by factor I, it can bind repeatedly to factor B (which is then inactivated), causing inactivation of the alternative pathway by consumption of factor B.
                                                                                                                                                                            Modified complement pathway protein that forms C3 convertase resistant to down-regulation - used to exhaust the complement pathway by super-activation, especially for preventing graft
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   04-MAR-1997;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Misc-difference 1634

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           និនិនិនិនិនិនិនិនិនិនិនិនិនិនិនិនិនិនិ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC forms a down-regulation resistant C3 convertase. (A), their variants, CC fragments and conjugates are used to deplete levels of complement C2 pathway proteins (by superactivation until one or more components are C3 exhausted), specifically to prevent rejection of foreign material C4 (particularly a xenograft) but also to prevent complement-mediated C5 diseases resulting from (surgical) injury or antibody-antigen interaction C6 in autoimmune disease, also to localise and/or amplify endogenous C7 complement protein conversion and deposition at a specific site (e.g. a C7 virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application is eliminating C6 contemplated is ex vivo treatment, especially by passing blood through a C7 contemplated is ex vivo treatment, especially by passing blood through a C7 contemplated is ex vivo treatment, especially by passing blood through a C7 contemplated is ex vivo treatment, especially by passing blood through a C7 contemplated is ex vivo treatment especially by passing blood through a C7 contemplated is ex vivo treatment especially by passing blood through a C7 contemplated is ex vivo treatment especially by passing blood through a C8 contemplated is ex vivo treatment especially to factor in call in the contemplated of the contemplated by factor I, it can bind repeatedly to factor B (which is then cinactivated), causing inactivation of the alternative pathway by C7 consumption of factor B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Best Loca

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC (see ANW34606 for wild type protein). This protein is a protein (a) the convention, and is a modified native complement pathway protein (A) that C forms a down-regulation resistant C3 convertase. (A), their variants, C4 fragments and conjugates are used to deplete levels of complement CC pathway proteins (by superactivation until one or more components are C exhausted), specifically to prevent rejection of foreign material C3 (particularly a xenograft) but also to prevent complement-mediated C4 diseases resulting from (surgical) injury or antibody-antigen interaction C5 in autoimmune disease, also to localise and/or amplify endogenous C4 complement protein conversion and deposition at a specific site (e.g. a C4 virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application is eliminating C5 complement cells left after surgical removal of a tumour). Also C5 contemplated is ex vivo treatment, especially by passing blood through a matrix containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or C6 (inhibited by factor I, it can bind repeatedly to factor B (which is then C6 inactivated), causing inactivation of the alternative pathway by C6 consumption of factor B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                           This sequence represents a mutated human C3 protein of the invention CC (see AAW34606 for wild type protein). This protein is a protein of the compensation, and is a modified native complement pathway protein (A) that CC forms a down-regulation resistant C3 convertase. (A), their variants, CC pathway proteins (by superactivetion until one or more complement complement are certifically to prevent rejection of foreign material capacitivation until one or more components are comparated to deplete levels of complement are comparated in autoimmune disease, also to prevent complement-mediated complement protein conversion and deposition at a specific site (e.g. a crimis, infected cell or tumour, particular application is eliminating complement-mediated responses; a particular application is eliminating contemplated is ex vivo treatment, especially by passing blood through a contemplated is ex vivo treatment, especially by passing blood through a contemplated is ex vivo treatment, especially by passing blood through a contemplated is ex vivo treatment, especially by passing blood through a contemplated is ex vivo treatment, especially by passing blood through a contemplated is factor mediators) or killing of leukaemia cells or contemplated by factor T, it can bind repeatedly to factor B (which is then can bind repeatedly to factor B (which is then can bind repeatedly to factor B (which is then can bind repeatedly to factor B).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC This sequence represents a mutated human C3 protein of the invention CC (see AAW34606 for wild type protein). This protein is a protein of the CC invention, and is a modified native complement pathway protein (A) that CC forms a down-regulation resistant C3 convertase. (A), their variants, CC fragments and conjugates are used to deplete levels of complement CC pathway proteins by superactivation until one or more components are CC exhausted), specifically to prevent rejection of foreign material CC diseases resulting from (surgical) injury or antibody-antigen interaction CC diseases resulting from (surgical) injury or antibody-antigen interaction CC complement protein conversion and deposition at a specific site (e.g. a C virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application; aliminating CC contemplated is ex vivo treatment, especially by passing blood though a CC contemplated is ex vivo treatment, especially by passing blood though a CC matrix containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or CC inhibited by factor I, it can bind repeatedly to factor B (which is then CC consumption of factor B.

This protein is a protein of the CC invention, and is a modified native complement pathway protein (A) that CC forms a down-regulation resistant C3 convertase. (A), their variants, CC fragments and conjugates are used to deplete levels of complement CC pathway proteins (by superactivation until one or more components are CC exhausted), specifically to prevent rejection of foreign matterial CC (particularly a xenograft) but also to prevent complement-mediated CC diseases resulting from (surgical) injury or antibody-antigen interaction CC in autoimmune disease, also to localise and/or amplify endogenous CC complement protein conversion and deposition at a specific site (e.g. a CC virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application is eliminating CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated lymphocytes in extracted bone marrow. Since (A) is not content to the content of the content of factor B (which is then content of factor B (which is then content of factor B (content of factor B content of factor B content

                                                                                                                                                           This sequence represents the wild type human C3 protein. This protein can be mutated to produce a protein of the invention. The protein of the CC invention is a modified native complement pathway protein (A) that forms CC and conjugates are used to deplete levels of complement pathway proteins (CC and conjugates are used to deplete levels of complement pathway proteins CC (by superactivation until one or more components are exhausted), CC specifically to prevent rejection of foreign material (particularly a CC conversat) injury or antibody-antigen interaction in autoimmune CC from (surgical) injury or antibody-antigen interaction in autoimmune CC disease, also to localise and/or amplify endogenous complement protein CC conversion and deposition at a specific site (e.g. a virus, infected cell CC or tumour, to increase sensitivity to complement-mediated responses; a CC particular application is eliminating any cancer cells left after CC surgical removal of a tumour). Also contemplated is ex vivo treatment, CC especially by passing blood through a matrix containing (A) (this may CC mediators) or killing of leukaemia cells or MHC-mismatched lymphocytes in CC contemplated bone marrow. Since (A) is not inhibited by factor I, it can bind repeatedly to factor B (which is then inactivated), causing CC inactivation of the alternative pathway by consumption of factor B.

```
This sequence represents a mutated human C3 protein of the invention (see AAW34606 for wild type protein). This protein is a protein of the invention, and is a modified native complement pathway protein (A) that forms a down-regulation resistant C3 convertase. (A), their variants, fragments and conjugates are used to deplete levels of complement pathway proteins (by superactivation until one or more components are exhausted), specifically to prevent rejection of foreign material (particularly a xenograft) but also to prevent complement-mediated diseases resulting from (surgical) injury or antibody-antigen interaction in autoimmune disease, also to localise and/or amplify endogenous complement protein conversion and deposition at a specific site (e.g. a virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application is eliminating any cancer cells left after surgical removals of a tumour). Also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     19-NOV-1996;

This sequence represents a mutated human C3 protein of the invention CC (see AAW34606 for wild type protein). This protein is a protein of the complement on the invention, and is a modified native complement pathway protein (A) that CC forms a down-regulation resistant C3 convertase. (A), their variants, CC fragments and conjugates are used to deplete levels of complement complement gathway proteins (by superactivation until one or more components are call the pathway proteins (by superactivation until one or more components are CC (particularly a xenograft) but also to prevent complement-mediated CC diseases resulting from (surgical) injury or antibody-antigen interaction in autoimmune disease, also to localise and/or amplify endogenous CC complement protein conversion and deposition at a specific site (e.g. a CC virus, infected cell or tumour, to increase sensitivity to complement mediated responses; a particular application is eliminating CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated is ex vivo treatment, especially by passing blood through a contemplated is ex vivo treatment, especially by passing blood through a matrix containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or CC contemplated lymphocytes in extracted bone marrow. Since (A) is not inactivated), causing inactivation of the alternative pathway by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Modified complement pathway protein that forms C3 convertase resistant to down-regulation - used to exhaust the complement pathway by super-activation, especially for preventing graft rejection, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               07-JUN-1996;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        á
This sequence represents a mutated human C3 protein of the invention (see AAW34606 for wild type protein). This protein is a protein of the cinvention, and is a modified native complement pathway protein (A) that forms a down-regulation resistant C3 convertase. (A), their variants, cf fragments and conjugates are used to deplete levels of complement pathway proteins (by superactivation until one or more components are exhausted), specifically to prevent rejection of foreign material (particularly a xenograft) but also to prevent complement-mediated diseases resulting from (surgical) injury or antibody-antigen interaction cin aucoimmune disease, also to localise and/or amplify endogenous complement protein conversion and deposition at a specific site (e.g. a virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application is eliminating any cancer cells left after surgical removal of a tumour). Also contemplated is ex viru treatment, especially by passing blood through a matrix containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or conference of the contemplate of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

This sequence represents a mutated human C3 protein of the invention (see AAW34606 for wild type protein). This protein is a protein of the invention, and is a modified native complement pathway protein (A) that forms a down-regulation resistant C3 convertase. (A), that variants, fragments and conjugates are used to deplete levels of complement pathway proteins (by superactivation until one or more components are exhausted), specifically to prevent rejection of foreign material (particularly a xenograft) but also to prevent complement mediated diseases resulting from (surgical) injury or antibody-antigen interaction in autoimmune disease, also to localise and/or amplify endogenous complement protein conversion and deposition at a specific site (e.g. a virus, infected cell or tumour, to increase sensitivity to
                                                                                                                                                                                                                                                                                                                                                                                                                      19-NOV-1996;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       contemplated is a vivo treatment, especially by passing blood through a matrix containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or MHC-mismatched lymphocytes in extracted bone marrow. Since (A) is not inhibited by factor I, it can bind repeatedly to factor B (which is then inactivated), causing inactivation of the alternative pathway by consumption of factor B.
                                                                                                                                                   Modified complement pathway protein that forms C3 convertase resistant to down-regulation - used to exhaust the complement pathway by super-activation, especially for preventing graft
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Misc-difference

Also contemplated is ex vivo treatment, especially by passing blood through a matrix containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or WHC-mismatched lymphocytes in extracted bone marrow. Since (A) is not inhibited by factor I, it can bind repeatedly to factor B (which is then inactivated), causing inactivation of the alternative pathway by consumption of factor B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      invention, and is a modified native complement pathway protein (A) that forms a down regulation resistant C3 convertage. (A), their variants, fragments and conjugates are used to deplete levels of complement pathway proteins (by superactivation until one or more components are exhausted), specifically to prevent rejection of foreign material (particularly a xenograft) but also to prevent complement-mediated diseases resulting from (surgical) injury or antibody-antigen interaction in autoimmune disease, also to localise and or amplify endogenous

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              complement protein conversion and deposition at a specific site (e.g. a virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application is eliminating any cancer cells left after surgical removal of a tumour). Also contemplated is ex vivo treatment, especially by passing blood through a matrix containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or MHC-mismatched lymphocytes in extracted bone marrow. Since (A) is not inhibited by factor I, it can bind repeatedly to factor B (which is then inactivated), causing inactivation of the alternative pathway by consumption of factor B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence represents a mutated human C3 protein of the invention (see AAW34606 for wild type protein. This protein is a protein of the invention, and is a modified native complement pathway protein (A) that forms a down-regulation resistant C3 convertase. (A), their variants, fragments and conjugates are used to deplete levels of complement pathway proteins (by superactivation until one or more components are exhausted), specifically to prevent rejection of foreign material (patricularly a xenograft) but also to prevent complement-mediated diseases resulting from (surgical) injury or antibody-antigen interaction in autoimmune disease, also to localise and/or amplify endogenous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Modified complement pathway protein that forms C3 convertase resistant to down-regulation - used to exhaust the complement pathway by super-activation, especially for preventing graft rejection, etc.
                                                                                                                                                                                                 down-regulation resistant C3 convertase; xenograft rejection; complement-mediated disease; autoimmune disease; leukaemia ce

                                                                                                                               This sequence represents a mutated human C3 protein of the invention CC (see AAW34606 for wild type protein). This protein is a protein of the crimention, and is a modified native complement pathway protein (A) that CC forms a down-regulation resistant C3 convertase. (A), their variants, CC fragments and conjugates are used to deplete levels of complement CC pathway proteins (by superactivation until one or more components are CC exhausted), specifically to prevent rejection of foreign material CC (particularly a xenograft) but also to prevent complement-mediated CC diseases resulting from (surgical) injury or antibody-antigen interaction CC complement protein conversion and deposition at a specific site (e.g. a CC complement protein conversion and deposition at a specific site (e.g. a CC complement-mediated responses; a particular application is eliminating CC complement-mediated responses; a particular application is eliminating CC contemplated is ex vivo treatment, especially by passing blood through a contemplated is ex vivo treatment, especially by passing blood through a content inflammatory mediators) or killing of leukaemia cells or CC content of the content of the alternative pathway by is then constituted by factor I, it can bind repeatedly to factor B (which is then constituted), causing inactivation of the alternative pathway by

                     virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application is eliminating any cancer cells left after surgical removal of a tumour). Also contemplated is ex vivo treatment, especially by passing blood through a matrix containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or MHC-mismatched lymphocytes in extracted bone marrow. Since (A) is not inhibited by factor I, it can bind repeatedly to factor B (which is then inactivated), causing inactivation of the alternative pathway by
                                                                                                                                                                                                                                                                                                                              fragments and conjugates are used to deplete levels of complement pathway proteins (by superactivation until one or more components are exhausted), specifically to prevent rejection of foreign material (particularly a xenograft) but also to prevent complement-mediated diseases resulting from (surgical) injury or antibody-antigen interaction in autoimmune disease, also to localise and/or amplify endogenous complement protein conversion and deposition at a specific site (e.g. a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Modified complement pathway protein that forms C3 convertase resistant to down-regulation - used to exhaust the complement pathway by super-activation, especially for preventing graft rejection, etc.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence represents a mutated human C3 protein of the invention (see AAW34606 for wild type protein). This protein is a protein of the invention, and is a modified native complement pathway protein (A) that forms a down-regulation resistant C3 convertase. (A), their variants,

```
밁
This sequence represents a mutated human C3 protein of the invention CC (see AAW34606 for wild type protein). This protein is a protein of the cinvention, and is a modified native complement pathway protein (A) that CC invention, and is a modified native complement pathway protein (A) that CC forms a down-regulation resistant C3 convertase. (A), their variants, cf fragments and conjugates are used to deplete levels of complement proteins (by superactivation until one or more components are exhausted), specifically to prevent rejection of foreign matterial (particularly a xenograft) but also to prevent complement-mediated cd diseases resulting from (surgical) injury or antibody-antigen interaction cin autoimmune disease, also to localise and/or amplify endogenous complement protein conversion and deposition at a specific site (e.g. a virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application is eliminating contemplated is ex vivo treatment, especially by passing blood through a mattir containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or contemplated in the contemplated is ex vivo treatment, especially by passing blood through a mattir containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   34
34617
                       This sequence represents a mutated human C3 protein of the invention (see AW34606 for wild type protein). This protein is a protein of the invention, and is a modified native complement pathway protein (A) that forms a down-regulation resistant C3 convertase. (A), their variants, fragments and conjugates are used to deplete levels of complement pathway proteins (by superactivation until one or more components are exhausted), specifically to prevent rejection of foreign material (particularly a xenograft) but also to prevent complement-mediated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            complement-mediated complement-mediated

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application is eliminating any cancer cells left after surgical removal of a tumour). Also contemplated is ex vivo treatment, especially by passing blood through a matrix containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or MHC-mismatched lymphocytes in extracted bone marrow. Since (A) is not inhibited by factor I, it can bind repeatedly to factor B (which is then inactivated), causing inactivation of the alternative pathway by consumption of factor B.
                                                                                                                                                                                                              Modified complement pathway protein that forms C3 convertase resistant to down-regulation - used to exhaust the complement pathway by super-activation, especially for preventing graft
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; C3 protein; convertase; complement pathway protein; infection; down-regulation resistant C3 convertase; xenograft rejection; therapy; complement-mediated disease; autoimmune disease; leukaemia cell; tumour;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC forms a down-regulation resistant C3 convertage. (A), their variants, CC fragments and conjugates are used to deplete levels of complement CC pathway proteins (by superactivation until one or more components are CC exhausted), specifically to prevent rejection of foreign material CC (particularly a xenograft) but also to prevent complement-mediated CC diseases resulting from (surgical) injury or antibody-antigen interaction CC in autoimmune disease, also to localise and/or amplify endogenous CC complement protein conversion and deposition at a specific site (e.g. a CC virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application; a eliminating CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated is ex vivo treatment, especially by passing blood through a CC matrix containing (A) (this may remove additional anabylactic peptides CC and other inflammatory mediators) or killing of leukaemia cells or CC MHC-mismatched lymphocytes in extracted bone marrow. Since (A) is not contivated by factor I, it can bind repeatedly to factor B (which is then consumption of factor B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

CC This sequence represents a mutated human C3 protein of the invention (see AAW34606 for wild type protein). This protein is a protein of the cinvention, and is a modified native complement pathway protein (A) that CC forms a down-regulation resistant C3 convertase. (A), their variants, CC pathway proteins (by superactivation until one or more complement c2 pathway proteins (by superactivation until one or more complement c3 pathway proteins (by superactivation until one or more complement c3 pathway proteins (by superactivation until one or more complement c4 pathway proteins (by superactivation until one or more complement c4 pathway proteins (by superactivation of foreign material c4 particularly a xenograft) but also to prevent complement-mediated (C4 particularly a xenograft) but also to prevent complement-mediated (C5 complement protein conversion and deposition at a specific site (e.g. a cy runs, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application; a eliminating c4 any cancer cells left after surgical removal of a tumour). Also contemplated is ex vivo treatment, especially by passing blood through a matrix containing (A) (this may remove additional anabylatetic peptides cand other inflammatory mediators) or killing of leukaemia cells or c5 midbited by factor I, it can bind repeatedly to factor B (which is then can sumption of factor B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁

The fragment was isolated from samples from affected individuals using SELDI (surface enhanced laser desorption ionisation) and a protein chip. The marker is useful in methods for diagnosing a disease state such as myocardial infarction, intracerebral hemorrhage or congestive heart failure. The methods used include mass spectroscopy or immunoassays, e.g. radioimmunoassay, enzyme-linked immunosorbent assay (ELISA) or fluorescent immunoassays. The invention enables a diagnostician to characterise the presence or absence of the disease state relative to recognition of the presence or absence of the biopolymer, respectively. The present sequence is the human complement C3f derived peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Biopolymer marker, useful in diagnosing disease states including myocardial infarction and intracerebral hemorrhage, comprises compliment C3f fragment with a specified molecular weight -
                               New biopolymer markers useful for indicating one particular disease state such as myocardial infarction, congestive heart failure and intracerebral hemorrhage

The biopolymer marker is useful for indicating one particular disease state such as syndrome X, myocardial infarction, congestive heart failure and intracerebral haemorrhage. The marker is released into the circulation where it may be present in the blood or any blood product. The presence of each marker is determined using antibodies specific for each of the markers and detecting specific binding of each antibody to its respective marker. The presents equence represents a biopolymer marker which is characterised as a human C3f fragment from the complement
                                                                    insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from
                                                                                                                                                                                                                                                                The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The inventuseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated nucleic a genes from Drosophila interactions -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 2001-656860/75.
